Lab Assistant

Company Background

Oxford Medical Products (OMP) is a venture-backed start-up building a platform based on its proprietary hydrogel technology. Based in Witney, Oxfordshire, OMP have developed a ground-breaking non-invasive weight loss solution that can be taken in the home. Obesity and excessive weight are pandemic causing a global health crisis, effecting nearly 2 billion people worldwide. There is an urgent need for a safe, efficacious and affordable therapy to aid weight loss for the global population. We're on a mission to ensure that we deliver this solution to the world.

We are looking to hire a Lab / cleanroom technician to help us bring our cutting edge technology to the market as quickly as possible. This position will be a vital contributor to the product development that enables our products to improve the lives of millions of people worldwide.

Cleanroom Technician Role Responsibilities

- Production of prototypes, pre-clinical and clinical trial products for development projects in an ISO 8 cleanroom facility.
- Performance and physical testing for existing and new products.
- Drafting of test documentation such as study protocols and technical reports.
- Documenting, interpreting and reporting laboratory data for development testing, including verification and validation studies.
Calibration, validation and cleaning of facility equipment.
- Cleaning and environmental monitoring of the cleanroom facility.
- General housekeeping of the office and stores area.
- Completing and updating quality records and following the documented quality management system.
- Contributing to continual improvement activities such as process optimisation, risk management and waste reduction.
- Taking part in external and internal audits of the quality management system.
- All other necessary tasks, as required by the Head of Operations.
- Cleanroom Technician Skills & Experience:
 - Competent in basic laboratory techniques e.g. use of an analytical balance, use of pipette, and good laboratory practice.
 - Competent in following and adhering to study protocols, SOPs and work instructions.
 - Competent in writing study protocols, collection and interpretation of data and report writing. Experienced in the utilisation of computer software to manage data and documentation. Can take individual responsibility and work independently for assigned work.
 - Makes effective use of time by effective planning in co-ordination with time scales defined by project team / direct line manager. Disciplined in adhering to group objectives.
 - A good team player, who is proactive and recognizes opportunities for improvement.
 - Can communicate effectively with various stakeholders both internally and externally.
 - Previous experience of working in a cleanroom and use of aseptic technique may be an advantage, but full training will be provided if needed.

- We are looking for the right person above all, so the position may be tailored to suit the perfect individual. We will actively encourage and support areas of personal development for the right candidate.
- Full time / Part time flexible (min 20h). Some morning weekend work will be required on site. This is a 'hands-on' position and therefore remote working is not possible.
- Job Types: Full-time, Permanent
- Salary: £25,000.00-£30,000.00 per year
